

# OTT Customer Churn Analysis

## Business Requirements Document (BRD)

---

**Prepared By:** Abhijeet Kedar

---

### Project Overview

This project analyzes OTT customer churn to identify churn drivers, high-value customers, and business opportunities using Excel, SQL, and Power BI.

### Business Problem

Customer churn reduces revenue and growth. The business requires insights to improve retention and profitability.

### Business Objectives

- Reduce churn
- Improve engagement
- Increase revenue
- Support business decisions

### Project Scope

In Scope: Data Cleaning, Power Query, Excel Dashboard, SQL, Power BI

Out of Scope: Machine Learning, Real-time integration

### Business Definitions

- **Churn Definition** : A customer is churned when Status = 'Churned'.
- **High Value Customer** : Premium subscription, high revenue, high engagement, longer tenure, active status.

### Possible Reasons for Churn

Low engagement, complaints, short tenure, basic plans, inactive usage.

## KPI's

| KPI             | Business Definition                                           | Calculation                                                                 | Target               | Current Value |
|-----------------|---------------------------------------------------------------|-----------------------------------------------------------------------------|----------------------|---------------|
| Churn Rate      | Percentage of customers who have churned.                     | $(\text{Churned Customers} \div \text{Total Customers}) \times 100$         | <i>To be defined</i> | N/A           |
| Upgrade Rate    | Percentage of customers who upgraded their subscription plan. | $(\text{Upgraded Customers} \div \text{Total Customers}) \times 100$        | <i>To be defined</i> | N/A           |
| Engagement Rate | Percentage of customers with Very High Engagement.            | $(\text{High Engagement Customers} \div \text{Total Customers}) \times 100$ | <i>To be defined</i> | N/A           |
| ARPU            | Average revenue generated per customer.                       | $\text{Total Revenue} \div \text{Total Customers}$                          | <i>To be defined</i> | N/A           |

**Note:** Upgrade Rate could not be calculated because the provided dataset does not include customer upgrade history.

## Stakeholders

CEO, Marketing Manager, Customer Success Manager, Product Manager, Finance Team, Business Analyst

## Business Questions

- What is churn rate?
- Highest revenue subscription?
- Highest churn engagement level?
- Top city?
- Highest churn age group?
- Complaint impact?
- Payment method churn?
- High-value customers?
- Retention opportunities?
- Revenue improvement opportunities?

## Assumptions

Example:

- CustomerID is unique.
- All datasets are available.
- Customer status accurately reflects churn.
- Revenue values are complete.

## Constraints

Example:

- Historical churn reasons are unavailable.
- Dataset is static.
- External market factors are excluded.

## Risks

Example:

- Missing data may affect analysis.
- Incorrect relationships may produce inaccurate KPIs.
- Future business rules may change.

## Success Criteria

Example:

The project will be considered successful if:

- Customer churn can be measured.
- KPIs are available.
- Dashboard supports business decisions.
- Business questions are answered.

## Conclusion

This document defines the business requirements, objectives, scope, stakeholders, and success criteria for the OTT Customer Churn Analysis project. It serves as the foundation for designing, developing, and implementing the analytical solution.
